

MsSQL - SQL Reporting Services

Enable Errors

1. Connect to the database engine in SSMS and navigate to the ReportServer database.
2. Query the ConfigurationInfo table to get familiar with it. Issue the following query:

```
USE ReportServer  
GO  
UPDATE ConfigurationInfo SET Value = 'True' WHERE Name = 'EnableRemoteErrors'
```

3. Restart Reporting Services on the server: Click Start > Administrative Tools > Services to open the Services management console. Right-click the SQL Server Reporting Services ([InstanceName]) service, and then click Restart.
