

# Visual Studio - Entity Framework Tips

```
dotnet tool install --global dotnet-ef  
dotnet ef migrations add CreateInitial  
dotnet ef database update
```

[https://www.youtube.com/watch?v=Fbf\\_ua2t6v4](https://www.youtube.com/watch?v=Fbf_ua2t6v4)

Scaffold

```
dotnet ef dbcontext scaffold "Data Source=mfb-us-sql-001;Initial  
Catalog=MyFFLBookAPI;TrustServerCertificate=True;User Id=XXXXXX;Password=XXXXXX"  
Microsoft.EntityFrameworkCore.SqlServer -c DataContext --context-dir Data -o Data -f
```
